

my space selection:

The environment around my bed as the first space I see very day and the last space I see at night.

Functions of the Space:

- **Lie Down**
- **Relax**
- **Unwind**
- **Sleep**
- **Day Dream**
- **Dream**
- **Think/Reflect**
- **Chill Out**
- **Wake Up**
- **Re- Energize**
- **Prepare**

- **What is an appropriate navigation for the space?**

Take viewers through a transition from consciousness to unconsciousness, dream like state.

- **What does it look like?**

Images change from realistic to soft, blurry, from light to dark, from colour to black and white.

- **How are the functions of the space expressed visually and how do they relate to/depart from the physical act of performing the function within the space?**

All functions/characteristics are seen from "eye" point of view from the pillow, moving around seeing different angles of the room.

- **Is my position interesting?**

Abstract, personal with intriguing images and narration.

- **How does the way the user navigates the website relate to the subject?**

Click on different zones of the eye to view various places and states of mind, view different day/night activities through objects in different sections of the room.

Bedside-night: Phone/socialmedia, candle, lavender pillow mist, eye mask

The transitions will be the eye blinking and a blurry background transitioning to a focused image. The top buttons represent the areas during the day, and the bottom during the night. There will be a gif of different objects in the pupil.
